Version 5 Update Installation Instructions

Hello Tradesmen's Customer:

For Updating Tradesmen's On Screen 3D Estimator, please follow these steps.

Please make sure you have a backup copy of .\OS3DE. Tradesmen's Software, Inc. cannot backup your data. If you do not already have a backup system in place, please contact your IT support and implement one right away. If you have no backup, there is nothing to recover from should there be a loss.

Tradesmen's Software OS3DE must be closed in order to update.

1. Download, Save and Install the **Setup*.exe** found on <http://tradesmens.com/updates/downloads/>.
2. On the 3rd screen on the install, instead of *Full Install*, please verify **'Upgrade to new version'** before clicking on [Next]
3. Verify destination folder on the 4th screen of the install, make sure you are directed to the location you specified. Our default location for a local install is C:\TSI\OS3DE. [Next]
4. This next screen will give you the opportunity to review your settings and go <Back> should you need to make changes. [Next]
5. You may not need to install the **Sentinel Protection Installer**, unless there have been updates to the driver. Running the install will not hurt anything and make sure you do have the latest driver in place. Your call, uncheck the box to skip that install. [Next]
6. [Finish]

7. Launch the Program. The updated program will require a pass-code for licensed customers that are NOT on our Yearly Technical Support program. Please call **1-800-429-9002** with the extended license screen present.

To see "What's New" in the latest version(s) of the estimating program, open Tradesmen's Master Estimator and click on the word '**Help**', then '**What's New**'. Please read about our additions and changes.
